

Macbook a1706 touchbar

<https://bbs.archlinux.org/viewtopic.php?id=309376>

changer kernel linux version to 6.12.51

```
uname -r
```

```
yay -S downgrade
```

utiliser les commande suivante pour prendre un kernel compatible inférieur a 6.12.51 les linux doit etre a la meme version

```
sudo downgrade linux-lts
```

```
sudo downgrade linux-lts-headers
```

```
sudo mkinitcpio -P
```

```
sudo reboot
```

```
git clone
```

```
cd
```

```
make
```

```
sudo mkdir -p /usr/lib/modules/$(uname -r)/updates/dkms/
```

```
sudo cp *.ko /usr/lib/modules/$(uname -r)/updates/dkms/
```

```
sudo depmod -a
```

```
sudo nano /etc/mkinitcpio.conf
```

```
replace  
MODULES=()
```

```
with  
MODULES=(applespi intel_lpss_pci spi_pxa2xx_platform apple_ib_tb)
```

```
sudo modprobe applespi  
sudo modprobe apple_ib_tb
```

```
sudo mkinitcpio -P
```

```
sudo mkdir -p /usr/src/applespi-0.1  
sudo cp * /usr/src/applespi-0.1/
```

```
sudo dkms add -m applespi -v 0.1  
sudo dkms build -m applespi -v 0.1  
sudo dkms install -m applespi -v 0.1
```

```
ls /lib/modules/$(uname -r)/updates/dkms/
```

```
sudo modprobe applespi  
sudo modprobe apple_ib_tb  
lsmod | grep apple
```

```
pilote touch bar
```

```
yay -S macbook12-spi-driver-dkms
```

autre

pour yay -S mac-touchbar-plus

sudo pacman -S rustup

rustup install stable

rustup default stable

rustup toolchain install nightly

RUSTUP_TOOLCHAIN=nightly yay -S mac-touchbar-plus
